

Step Deep Dive

Name of the step

Track follow-ups and commitments

1 Copy the step

Copy the step under consideration from the main board (it is fine to copy just this step).

2 minutes

Step	Actions by Human	Tools and Platforms	Pain Points
Track follow-ups and commitments	1. Remember dates like check back in Q4 2. Chase proposals from memory	1. Calendar 2. Memory 3. Occasional CRM tasks	1. Commitments rarely recorded 2. Unanswered proposals not chased 3. Follow-up only when the client returns

2 Bring the AI Cards

Bring all relevant 33A AI Cards for applying AI to this step here.

15 minutes

Copy cards from the AI Cards section of the Card Bank frame on this board.

AI reads and understands text, and chats with people via text	AI predicts the likelihood of customers leaving	AI summarizes text	AI plans and recommends the best next steps	AI performs office tasks
---	---	--------------------	---	--------------------------

3 Pick the top AI Cards

Move the most relevant AI Cards here. Usually it works best not to exceed 3.

5 minutes

AI reads and understands text, and chats with people via text	AI summarizes text	AI plans and recommends the best next steps
---	--------------------	---

4 Use the AI Cards

Describe how you would use each selected AI Card to enable this step with AI.

5 minutes

AI spots commitments, revisit dates and deferrals like 'check back in Q2 2026', and silent proposals	AI writes a short follow-up email from the deal's records, every fact quoted	AI ranks follow-ups by urgency with a live timer per deal, plus a daily summary
--	--	---

5 Summarise the change

Summarise how AI changed the workflow (combine the notes above).

5 minutes

Follow-ups stop depending on memory. The assistant finds revisit dates and silent proposals, shows each deal's countdown, and drafts the reply. The owner edits and sends it, and decides what to do.

6 Redesign the step

Move the proposed AI process to the AI and tools row and update the human actions and pain points to match.

5 minutes

Step	Actions by Human	AI and Digital Tools	New Pain Points
Track follow-ups and commitments	Act on the most urgent deal; edit and send the drafted reply	1. AI finds follow-up signals and revisit dates 2. Live due-in / overdue timer per deal 3. AI drafts the reply; daily summary	1. Missed follow-up signals 2. Reminder fatigue 3. Reminders on ownerless deals reach nobody

7 Select the Ethical Risk Cards

Bring the Ethical Risk Cards that are relevant to this step to the grey area.

10 minutes

Copy cards from the Risk Mitigation Cards section of the Card Bank frame on this board.

PEOPLE'S RELATIONSHIPS Strengthens rather than distracts from relationships between people.	EXPLAINABILITY, TRANSPARENCY How the AI reached a decision is explained in plain language.	ACCOUNTABILITY It is clear which person is responsible for each AI action and decision.	PRESERVE HUMAN DOMINANCE Humans stay in control of the AI.
---	--	---	--

8 Mitigate the risks

Describe how you would mitigate the risks highlighted above.

10 minutes

Assistant never sends: the owner edits and sends drafted emails	Reminder shows the source message	Owner named on every deal; ownerless deals listed first in the queue	Deals without a next step flagged on the board and daily	Kill switch if a client is contacted without approval	Email drafts quote every fact; unverified facts flagged
---	-----------------------------------	--	--	---	---

Step Deep Dive

Name of the step

Record the lead and deal in the CRM

1 Copy the step

Copy the step under consideration from the main board (it is fine to copy just this step).

2 minutes

Step	Actions by Human	Tools and Platforms	Pain Points
Record the lead and deal in the CRM	1. Type leads into the CRM in batches 2. Enter source, requirement and stage 3. Check for existing contacts	1. CRM 2. Email for copying details	1. CRM updated days later with little detail 2. Many leads never entered 3. Duplicate records

2 Bring the AI Cards

Bring all relevant 33A AI Cards for applying AI to this step here.

15 minutes

Copy cards from the AI Cards section of the Card Bank frame on this board.

AI sorts information into groups	AI organizes data from emails and notes into spreadsheets	AI shows the connection of different data	AI summarizes text	AI reads and understands text, and chats with people via text	AI recognizes anomalies in a lot of data
----------------------------------	---	---	--------------------	---	--

3 Pick the top AI Cards

Move the most relevant AI Cards here. Usually it works best not to exceed 3.

5 minutes

AI sorts information into groups	AI organizes data from emails and notes into spreadsheets	AI shows the connection of different data
----------------------------------	---	---

4 Use the AI Cards

Describe how you would use each selected AI Card to enable this step with AI.

5 minutes

AI sorts each email and meeting into new lead, existing deal, existing client, internal note on several deals, or not sales	AI pulls company, contact, source, requirement, stage and next step into a draft, each field quoted from its source	AI finds the existing contact or deal and proposes an update instead of a duplicate
---	---	---

5 Summarise the change

Summarise how AI changed the workflow (combine the notes above).

5 minutes

Founders no longer type leads into the CRM days later. The assistant drafts each record from the conversation with source links, checks for duplicates, and turns a pipeline review into one draft per deal. The deal owner confirms each in under a minute.
--

6 Redesign the step

Move the proposed AI process to the AI and tools row and update the human actions and pain points to match.

5 minutes

Step	Actions by Human	AI and Digital Tools	New Pain Points
Record the lead and deal in the CRM	Review, edit and confirm drafts in under 1 minute	1. AI extracts CRM fields into a draft record 2. Matches existing contacts and deals 3. Splits internal notes per deal; each field quoted	1. Wrong or invented field values 2. Wrong merges of two clients

7 Select the Ethical Risk Cards

Bring the Ethical Risk Cards that are relevant to this step to the grey area.

10 minutes

Copy cards from the Risk Mitigation Cards section of the Card Bank frame on this board.

PRIVACY People control the data used to train and run AI systems.	EXPLAINABILITY, TRANSPARENCY How the AI reached a decision is explained in plain language.	ACCOUNTABILITY It is clear which person is responsible for each AI action and decision.	CHECK, GOVERNANCE The AI is checked regularly, can be stopped, and harm can be redressed.	PRESERVE HUMAN DOMINANCE Humans stay in control of the AI.	NO MISUSE Use against the intended purpose is prevented, and so is harmful overuse.
---	--	---	---	--	---

8 Mitigate the risks

Describe how you would mitigate the risks highlighted above.

10 minutes

Owner confirms every record before saving	Every field linked to its source	Missing fields left empty, never guessed	Personal and excluded items never stored	Data in approved region, encrypted	Low-confidence fields highlighted
Monthly audit of confirmed records					

Process Board

Name of the process

Lead Capture and Follow-up

Department

Founder-led Sales, AtliQ Technologies

1 Map the current process

Fill the yellow cards with the process steps, then the cards below with actions by humans, the tools and platforms used, and the current pain points. Then vote for the most painful areas using the red dots.

20 minutes

	Input	Step 1	Step 2	Step 3	Step 4	Step 5	Step 6	Step 7	Output
Process steps	New lead via referral, LinkedIn, conference or existing client	Hold the sales conversation	Keep lead details until there is time	Record the lead and deal in the CRM	Track follow-ups and commitments	Spot cross-sell and upsell with existing clients	Review the pipeline and plan revenue	Close the deal	Deal won and pipeline kept current
Actions by Human		1. Talk to the lead by email, call or meeting 2. Chat on LinkedIn or at events 3. Agree needs and next step verbally	1. Keep details in inbox, notes or memory 2. Remember who said what	1. Type leads into the CRM in batches 2. Enter source, requirement and stage 3. Check for existing contacts	1. Remember dates like check back in Q4 2. Chase proposals from memory	1. Notice new client needs in conversations 2. Match needs to AtliQ services	1. Founders review deals in meetings 2. Ask the team for status	1. Send proposal and negotiate 2. Decide pricing and discounts	
Actions by Digital Tools and Platforms in use		1. Email 2. Calendar 3. LinkedIn 4. Phone and messaging apps	1. Inbox 2. Personal notes 3. Memory	1. CRM 2. Email for copying details	1. Calendar 2. Memory 3. Occasional CRM tasks	1. Email 2. Founders' knowledge of services	1. CRM reports 2. Spreadsheets	1. Email 2. Proposal documents 3. CRM	
Associated Pain Points with Current Solutions		1. Conversations spread across many channels 2. Leads at events and travel go unnoticed	1. Context depends on memory 2. Details lost between meetings	1. CRM updated days later with little detail 2. Many leads never entered 3. Duplicate records	1. Commitments rarely recorded 2. Unanswered proposals not chased 3. Follow-up only when the client returns	1. Cross-sell signals stay in emails 2. Opportunities go unnoticed	1. No reliable pipeline view 2. Inactive deals go unseen	Deals go quiet before closing	

2 Redesign the process with AI

Consolidate the findings from the step deep dives where you applied AI to automate the process. Show the new human actions, the AI and tools, the pain points that remain and the guardrails each step needs.

5 minutes

	Input	Step 1	Step 2	Step 3	Step 4	Step 5	Step 6	Step 7	Output
Process steps	New lead via referral, LinkedIn, conference or existing client	Hold the sales conversation	Keep lead details until there is time	Record the lead and deal in the CRM	Track follow-ups and commitments	Spot cross-sell and upsell with existing clients	Review the pipeline and plan revenue	Close the deal	Deal won and pipeline kept current
Actions by Human		Hold the conversation as usual	Paste or forward the note; nothing to remember or re-type	Review, edit and confirm drafts in under 1 minute	Act on the most urgent deal first; edit and send the drafted reply	Judge which suggestions to pursue	Use the pipeline board, action queue and Ask AI in weekly reviews	Pricing, priority and discounts stay with founders	
Actions by AI and Digital Tools		Read-only email and calendar with consent (prototype: paste, upload, sample sync)	AI classifies each item: new lead, existing deal, internal note on several deals, or not sales	1. AI drafts CRM fields, each quoted from its source 2. Matches existing deals 3. Splits internal notes into one draft per deal	1. AI finds commitments, revises dates and status proposals 2. Live drafts / overdue timer per deal 3. AI drafts the follow-up email	AI suggests services from the client's own history and the service catalogue, with evidence	1. Dashboard, stage board and action queue 2. Ask AI answers pipeline questions with quotes	Action log of every assistant step	
Associated Pain Points with New Solutions		Founders must trust the assistant reading work email	Misclassified personal or internal emails	1. Wrong or invented field values 2. Wrong merges of two clients	1. Missed follow-up signals 2. Reminder fatigue 3. Reminders on ownerless deals reach nobody	1. Irrelevant suggestions 2. Deferred until V1 data quality is proven	1. Dashboard only as good as confirmed records 2. Answers may trust stale CRM notes	1. Over-reliance on assistant suggestions 2. AI usage limits delay capture	
Guard Rails & Risk Mitigation Needed		1. Explicit written consent 2. Users can exclude contacts, threads and labels	1. Personal items skipped and never stored 2. Mask passwords and bank details	1. Nothing saved without owner confirmation 2. Every field quoted; gaps left empty 3. Merges need owner approval	1. Every open deal needs a next step 2. Assistant never contacts clients; the owner sends drafted emails	1. Use only the same client's history 2. Show the evidence for each suggestion	1. Monthly audit of confirmed records 2. Newest conversation beats stale CRM notes 3. Not used to monitor staff	1. Commercial decisions stay human 2. Full audit log; pause switch stops all processing	

Card Bank

AI Cards

Copy the cards that fit your step into the Step Deep Dive (section 2).

AI finds and organizes information

AI finds all relevant information

AI finds the one specific information

AI organizes data from emails and notes into spreadsheets

AI sorts information into groups

AI shows the connection of different data

AI enhances data

AI gains insights from data and understands the past and the present

AI understands markets, geographical business areas, and competitors

AI understands the emotional tone and the public opinion in text

AI identifies trends, patterns, and relationships to gain insights

AI recognizes anomalies in a lot of data

AI knows the customer

AI develops analysis and strategy

AI visualizes data in the form of dashboards and reports

AI explains complex topics

AI provides answers

AI performs tasks

AI helps customers with tasks

AI performs office tasks

AI performs tasks in people's private lives

AI assists in various areas of life, such as health, finance, and education

AI does math

AI performs tasks in production and agriculture

AI coaches

AI completes large tasks

AI figures out how to perform a new task by itself

AI makes decisions and recommendations

AI assists in decision-making in areas such as marketing, logistics, and finance

AI solves complex day-to-day operational business problems

AI plans and recommends the best next steps

AI assists in long-term strategic decision-making

AI highly personalises products and services

AI suggests risk mitigation strategies

AI checks the compliance of decisions

AI gets smarter over time and makes choices that fit you better and better

AI makes and carries out decisions on its own

AI sees

AI recognizes faces, understands facial expressions, and detects emotional states

AI sees human motion, including gestures and lip-reading

AI recognizes objects

AI understands what happens in images

AI understands what happens in videos

AI describes images or videos in text form

AI visually inspects things and monitors construction progress

AI sees and understands diagrams, charts, graphs and sketches

AI reads and writes

AI reads and understands text, and chats with people via text

AI understands emotions expressed in text

AI writes text

AI summarizes text

AI checks text, and improves text

AI translates text

AI answers questions in written form

AI receives commands given in text form and executes those tasks

AI can keep up a long text conversation

AI auto-suggests text

AI hears and talks

AI understands speech and talks

AI understands emotions in speech

AI recognizes people by their voice

AI converts text into speech and speech into text

AI recognizes specific sounds

AI translates speech

AI answers questions verbally

AI receives spoken commands and executes the assigned tasks

AI senses the environment

AI recognizes touch

AI tastes

AI smells

AI senses the environment beyond human senses

AI creates

AI creates images

AI creates videos

AI creates music

AI creates content for different formats

AI creates products

AI creates designs

AI writes software

AI generates synthetic data

AI generates synthetic characters for VR and the internet

AI creates short-term plans

AI creates comprehensive long-term strategies

AI creates list of ideas

AI solves complex problems

AI optimizes complex processes

AI optimizes research & development

AI optimizes pricing

AI optimizes logistics, routes, and supply chains

AI optimizes production, warehousing, and farming

AI performs quality control and maintenance

AI optimizes large systems, such as energy grids and water supplies for cities

AI forecasts

AI forecasts risk

AI predicts and detects fraud

AI predicts future events and forecasts outcomes

AI predicts the likelihood of customers leaving

AI forecasts demand

AI forecasts what will happen in markets

AI predicts consumer preferences

AI predicts when industrial machinery will most likely fail

AI controls machines and robots

AI controls machines and robots at home

AI controls robots in warehouses, fulfillment centers, and supermarkets

AI controls robots in farming, mining, manufacturing, and healthcare

AI drives vehicles

AI flies drones, helicopters, and airplanes

AI controls robots that sail, swim, walk, run, or jump

AI controls robots that work together with people

AI controls robots that keep people company

Other technologies

Quantum Computing

Brain-Machine Interface

3D Printing

Wearables

Augmented Reality, Virtual Reality, and Mixed Reality

Internet of Things (IoT)

Blockchain

Nanotechnology

Robotic Process Automation (RPA)

Biotechnology, Synthetic Biology

Digital Twins

Digital Technology

Joker

Risk Mitigation Cards (Ethical Risk Cards)

Copy the risks that apply into section 7 of the Step Deep Dive.

FAIRNESS

Everyone is treated fairly and equally, with no racial, gender or other bias.

EXPLAINABILITY, TRANSPARENCY

How the AI reached a decision is explained in plain language.

PRIVACY

People control the data used to train and run AI systems.

DISPLACEMENT STRATEGY

People whose work is taken over by AI are retrained for other work.

IDENTITY

An AI that talks with people says that it is an AI.

DIGNITY

People are always treated with respect.

GREEN

Neutral or positive effect on nature.

PEOPLE'S RELATIONSHIPS

Strengthens rather than distracts from relationships between people.

NO MISUSE

Use against the intended purpose is prevented, and so is harmful overuse.

EMPOWERING UNDERSERVED ONES

Positive impact on people who are left behind.

ACCOUNTABILITY

It is clear which person is responsible for each AI action and decision.

RIGHT INCENTIVES

No incentives that push people to misuse the AI or the AI to behave badly.

PEOPLE'S SAFETY

People are physically and mentally safe.

CHECK, GOVERNANCE

The AI is checked regularly, can be stopped, and harm can be redressed.

BENEFICIAL

The common good is promoted.

PRESERVE HUMAN DOMINANCE

Humans stay in control of the AI.
